

The Pond

10 Station Cottages, Kingussie

Design Case study Design Case study Design Case study Design Case study

This is a lovely example of how care and attention can really make something simple very special.

The pond was constructed entirely by the owner David Douglas, and has allowed wildlife to flourish in the garden of his house in Kingussie.

Environmental credentials

The pond is constructed mainly from slate recycled from the roof of the house.

It has encouraged a lot more wildlife into the garden.

Its design makes the most of the topography of the garden and reflects its surroundings and relationship with the wider landscape in Badenoch.

Location
