

Appendix 3

Planning Policies

Cairngorms National Park Local Plan (2010)

<http://cairngorms.co.uk/park-authority/about-us/publications/?publicationID=265>

Policy 1 – Natura 2000 Sites

This policy is applicable if it is considered that any impacts from the development may affect a NATURA site and at the planning in principle stage it was considered there would not be any significant effects subject to a suitable construction method statement being submitted in due course. The policy sets out that development likely to have a significant effect on a Natura 2000 site will be subject to an appropriate assessment in accordance with the Conservation (Natural Habitats, &c.) Regulations 1994. Where an assessment is unable to ascertain that a development will not adversely affect the integrity of the site, the development will only be permitted where:

- a) there are no alternative solutions; and
- b) there are imperative reasons of overriding public interest, including those of a social or economic nature.

Where the site has been designated for a European priority habitat or species, development will only be permitted where the reasons for overriding public interest relate to human health, public safety, beneficial consequences of primary importance for the environment or other reasons subject to the opinion of the European Commission (via Scottish Ministers).

Policy 4 Protected Species

Development that would have an adverse effect on any European Protected Species will not be permitted unless there are public health/safety or other imperative reasons of overriding public interest; there is no satisfactory alternative solution and the development would not be detrimental to the maintenance of the population of the species concerned.

Policy 5 – Biodiversity

Development that would have an adverse effect on habitats or species identified in the Cairngorms Local Biodiversity Action Plan, UK Biodiversity Action Plan, or by Scottish Ministers through the Scottish Biodiversity List, including any cumulative impact will only be permitted where:

- a) the developer can demonstrate to the satisfaction of the planning authority, that the need and justification for the development outweighs the local, national or international contribution of the area of habitat or populations of species; and
- b) significant harm or disturbance to the ecological functions, continuity and integrity of the habitats or species populations is avoided, or minimised where harm is unavoidable, and appropriate compensatory and/or management measures are provided and new habitats of commensurate or greater nature conservation value are created as appropriate to the site.

Where there is evidence to indicate that a habitat or species may be present on, or adjacent to, a site, or could be adversely affected by the development, the developer will be required to undertake a comprehensive survey of the area's natural environment to assess the effect of the development on it. This policy is supported by Supplementary Planning Guidance on Natural Heritage.

Policy 6 – Landscape

There will be a presumption against any development that does not complement and enhance the landscape character of the Cairngorms National Park, and in particular, the setting of the proposed development.

Proposed development that does not complement and enhance the landscape character of the Park and the setting of the proposed development will be permitted only where:

- a) any significant adverse effects on the landscape character of the Park are clearly outweighed by social or economic benefits of national importance; and
 - b) all the adverse effects on the setting of the proposed development have been minimised and mitigated through appropriate siting, layout, scale, design and construction to the satisfaction of the planning authority.
-

Policy 12 – Water Resources

A Use of Resources

There will be a presumption against development which does not meet all of the following criteria:

- 1) minimises the use of treated and abstracted water;
- 2) does not result in the deterioration of the current or potential ecological status or prejudice the ability to restore water bodies to good ecological status;
- 3) treat surface water and foul water discharge separately and in accordance with SUDS Manual Ciria C697;
- 4) have no significant adverse impact on existing or private water supplies or wastewater treatment services.

B Flooding

There will be a presumption against development which does not meet all of the following criteria relating to flooding:

- 1) be free from significant risk of flooding;
- 2) does not increase the risk of flooding elsewhere;
- 3) does not add to the area of land that requires flood prevention measures;
- 4) does not affect the ability of the functional floodplain to store or move flood waters.

Note: Development in areas susceptible to flooding will require a developer-funded flood risk assessment, carried out by a suitably qualified professional.

C Connection to sewerage

There will be a presumption against development which is not connected to the public sewerage network unless:

- 1) it is in a small settlement (population equivalent less than 2000), where there is no, or a limited, collection system, in which case a private system may be permitted where it does not pose or add to a risk of detrimental effect, including cumulative, to the natural and built environment, surrounding uses or the amenity of the area; or
- 2) it is in a larger settlement (population equivalent over 2000) where connection is currently constrained but is within the Scottish Water investment programme.

In such cases:

- systems must be designed and built to a standard to allow adoption by Scottish Water;
- systems must be designed so that in the future, they can be easily connected to the public sewer.

Where a private system is acceptable (within small settlements or small-scale development in the countryside) a discharge to land (either full soakaway or raised mound soakaway) compatible with the Scottish Building Standards Agency Technical Handbooks should be explored prior to considering a discharge to surface water.

Policy 16 – Design Standards for Development

Design of all development will seek, where appropriate, to:

- a) minimise the effect of the development on climate change;
- b) reflect and reinforce the traditional pattern and character of the surrounding area and reinforce the local vernacular and local distinctiveness, whilst encouraging innovation in design and use of materials;
- c) use materials and landscaping that will complement the setting of the development;
- d) demonstrate sustainable use of resources (including the minimisation of energy, waste and water usage) throughout construction, within the future maintenance arrangements, and for any decommissioning which may be necessary;
- e) enable the storage, segregation and collection of recyclable materials and make provision for composting;
- f) reduce the need to travel;
- g) protect the amenity enjoyed by neighbouring properties and all proposals will be designed to help create environments that can be enjoyed by everyone;
- h) be in accord with the design standards and palette of materials as set out in the Sustainable Design Guide and any other Supplementary Planning Guidance produced relating to design for new developments.

All proposals must be accompanied by a design statement which sets out how the requirements of the policy have been met.

Policy 18 – Developer Contributions

Development which gives rise to a need to increase or improve public services, facilities or infrastructure, or mitigate adverse effects, will normally require the developer to make a fair and reasonable contribution in cash or kind towards the additional costs or requirements. This policy does not strictly apply to the current application given that developer contributions were agreed at the planning in principle stage.

Policy 19 – Contributions to Affordable Housing

Developments of three or more dwellings will be required to incorporate a proportion of the total number of units as affordable housing.

Development solely for affordable housing will be favourably considered.

Where public funding is available to help provide affordable housing, between 25 per cent and 40 per cent of all units will be expected to be affordable. Where less than one third of the total cost of the development is available through public funding, the developer will be required to provide 25 per cent affordable housing on a site.

Proposals for one and two open market dwellings will also be required to make a contribution towards affordable housing. This will be a cash payment towards the meeting of housing need in the local area. Proposals for off site contributions will be considered where community needs assessments, or similar assessments, support this as a better way of meeting the housing needs of the community.

Policy 20 – Housing Development within Settlements

Settlement boundaries have been identified which indicate the extent to which these settlements may expand during the Local Plan period and new housing development should be contained within these boundaries.

Housing proposals within these settlement boundaries will be considered favourably where the development:

- a) occurs within an allocated site identified within the proposals' maps; or
- b) is compatible with existing and adjacent land uses, and comprises infilling, conversion, small scale development, the use of derelict or underused land or the redevelopment of land.

The proposal should reinforce and enhance the character of the settlement, and accommodate within the development site appropriate amenity space, and parking and access arrangements.

Policy 25 – Business Development

Proposals which support economic development will be considered favourably where the proposal is compatible with existing business uses in the area, supports or extends an existing business, is located within an allocated site identified on the proposals' maps, or where the following criteria are met:

A In identified settlements

- 1) is located within an existing settlement boundary; and
- 2) supports the economic vitality and viability of that centre.

Exceptions to this should demonstrate social or community need for the proposal. The potential cumulative impact of similar proposals will also be taken into account; or

B Outwith settlements

- 1) is in an existing business park or industrial estate; or
- 2) where it can be demonstrated that there are no more sequentially appropriate sites available.

Developments should have no adverse impact on the existing vitality or viability of the settlement, or neighbouring existing business parks or industrial estates; or

C Other business opportunities

- 1) supports the vitality and viability of a farm, croft or other businesses in a rural location; or
- 2) is complementary to that current rural business activity; or
- 3) promotes diversification within that business; or
- 4) creates new small scale development which supports the local economy.

D Loss of business

Development proposals which would result in a loss of business use on the proposal site will be resisted unless it can be demonstrated that the retention of the business on the existing site is not viable.

Policy 26 – Retail Development

Retail development proposals which support the local economy will be favourably considered where the following criteria are met:

A Within identified town/village centres

- 1) the proposal adds to the economic vitality and viability of that town/village centre; and
- 2) has no adverse impact on neighbouring properties.

Proposals should consolidate the traditional high street found within the centre in terms of visual impact and built form and take into account any settlement statement and Supplementary Planning Guidance relating to that settlement.

B Within edge of town centre

- 1) where there are no suitable sites within the town/village centre in line with the sequential approach; and
- 2) where there would be no detrimental impact on the vitality and viability of the town/village centre.

C Out of centre locations

- 1) where there are no suitable sites in town village centres or within edge of town centre locations in line with the sequential approach; and
 - 2) where there would be no detrimental impact on the vitality and viability of the town/village centre.
-

Policy 29 – Integrated Sustainable Transport Network

Development proposals will be favourably considered where the planning authority is satisfied that adequate consideration has been given to maintaining or improving the sustainable transport network within the Cairngorms National Park through the use of:

- a) methods to reduce car dependency;
- b) promotion of sustainable transport modes;
- c) creation of, or linking to, any existing hierarchy of travel modes, based on walking and cycling, including core paths network, safe routes to schools and workplaces, public transport and then motorised modes; and
- d) mechanisms to reduce the need to travel.

Where the transport impacts of a proposed development are considered to be significant, by virtue of its size, nature or location, developers will be required to submit a transport assessment covering the local transport impacts of the development, including those during the construction phase, and also where appropriate, submit a green transport plan indicating measures to reduce the impact of travel to the development. Such proposals should make a positive contribution towards the sustainable transport network in the Cairngorms National Park.

Policy 36 – Other Open Space Provision

Developments which improve or add to current levels of public and amenity open space, and include specific details on improving and maintaining current provision to develop open space networks will be supported. The development of all housing/ employment/ community sites identified within the proposals' maps will be required to make a contribution in space or by a commuted sum towards the provision and maintenance of open space within the site or the affected community.

There is a presumption against development that would result in a loss of existing provision, particularly where the affected site has been identified within the Local Plan proposals' maps or Open Space Strategy.

The loss of such open space will only be supported where:

- a) an open space audit demonstrates the development will not result in a deficit of open space provision to serve the affected community, and that no alternative site is available; or
 - b) compensatory provision is made elsewhere within the community area of at least equal size and quality, or
 - c) a commuted sum is made towards future provision of an appropriate alternative.
-

Settlement strategy –

<http://cairngorms.co.uk/park-authority/about-us/publications/?publicationID=265>

Kingussie is a strategic settlement within the settlement hierarchy and it is identified as a main settlement in the Cairngorms National Park Plan.

KG/HI

- i. This 16.05Ha site would provide land for short and longer term housing supply in Kingussie. It could provide land for around 300 dwellings, with 75 of these provided during the life of the Local Plan. The phasing of the site will need to take into account access provision to the site and the capacity of the existing road network.
- ii. The site runs north from the A86 by Craig an Darach towards Kerrow Farm and west from Kerrow Farm to the rear of properties bounding Ardbroilach Road, and is bounded by forestry to the north. The site is currently improved grassland grazed by livestock.
- iii. Access to this site should be taken from the local road network. A traffic impact assessment will be required to ensure development of this site ,and others in neighbouring Newtonmore, does not create an unacceptable cumulative impact on the A86 or A9.
- iv. The Cairngorms National Park Authority will work with partners to produce a masterplan for the site to ensure effective provision of housing. This masterplan should clarify the position regarding key infrastructure issues.

The development of this site presents an excellent opportunity to provide opportunities for large and small scale developers and builders to work together to bring forward the delivery of the proposal. This will be recognised in the masterplan.

KG/EDI : Land to the east of the settlement provides opportunity for economic development in support of the settlement and its sustainable community. A prominent site, the design of any development will be to the highest standards and both the siting and design should integrate with the landscape.

KG/Env: A number of open spaces and land, which contribute to the setting of Kingussie, are identified and will be protected from adverse development. (This policy covers the Shinty Pitch area)
