SUB-AREA	National Park setting (4a)
Purpose of identifying this sub-area	To protect the setting of the Cairngorm National Park. In terms of PAN45 this is a **Type 3** area (refining what's left)
Reason(s) for the sub-area being defined as shown	Protecting the ridgeline and south-facing slopes towards National Park which protects localised short-distance views from Park and longer views from Cairngorm Mountains. Or should there be a reconsideration of the northern boundary of this sub-area in terms of whether there is part of the sub-area within which development could be accommodated without affecting views from the National Park?
Development type(s) steered away	• Large • Medium • Small
Development type(s) for which there is potential capacity (from landscape and visual point of view alone)	None.
Other development guidance (if any)	

SUB-AREA	National Park setting and Lochindorb (4b)
Purpose of identifying this sub-area	To protect the setting of the Cairngorm National Park. To protect qualities of Drynachan, Lochindorb and Dava Moors SLA with particular emphasis on the immediate environs of Lochindorb. In terms of PAN45 this area is **Type 3** (refining what's left).
Reason(s) for the sub-area being defined as shown	Protecting the ridgeline and south-facing slopes towards National Park which protects localised short-distance views from Park and longer views from Cairngorm Mountains. Protecting valuable asset, which provides relatively unique and accessible upland landscape and tourist routes from Speyside to Moray Firth coast. Having regard to existing windfarm development including those within the Moray Council area. NB. Note presence of Drynachan, Lochindorb and Dava Moors SLA.
Development type(s) steered away	• Large • Medium • Small
Development type(s) for which there is potential capacity (from landscape and visual point of view alone)	None.
Other development guidance (if any)
