

The Scottish Wild Mushroom Code

The countryside is a working landscape. Please be aware of your own safety and follow the Scottish Outdoor Access Code. In accordance with this code there are some instances e.g. commercial harvest, where you are advised to make contact with the land manager before you collect mushrooms.

By respecting the natural environment you can help to manage and conserve the countryside.

When collecting mushrooms for any purpose, please consider the following points overleaf.

The Scottish Wild Mushroom Code

This code was created by the Scottish Wild Mushroom Forum, a group consisting of representatives of conservation organisations, landowners, public landowning bodies, mushroom buyers and mushroom pickers.

The creation of the Forum and the Code was funded by Scottish Natural Heritage, The Millennium Forest for Scotland Trust and Moray, Badenoch and Strathspey Enterprise.

What to collect

- Wildlife, especially insects, need mushrooms too, so only collect what you will use.
- Some mushrooms are poisonous and others rare and should not be collected
 - only collect what you know and take a field guide with you to identify mushrooms where you find them.
- Some species are vulnerable, so please consider whether there is an alternative species that is more common that might suit your purpose.

If you own or manage land:

- Mushrooms are a critical part of the natural cycle in grassland and woodlands; if these are compromised all elements of the ecosystem will be affected. Be aware that your management activities may affect mushrooms.

If you wish to run a foray or collect for scientific purposes remember to:

- Ensure the safety of your party; make contact with the land manager in advance of your visit.
- Give a record of what you have found to the land manager and explain the significance of your findings.

How to collect

- Allow mushrooms to release spores, do not pick mushrooms until the cap has opened out and leave those that are past their best.
- The main part of the mushroom is below the surface, take care not to damage or trample it, and not to disturb its surroundings.
- Scatter trimmings discreetly in the same area as the mushrooms came from.

Where to collect

- Before you collect mushrooms at a nature reserve please always seek advice from the manager, as special conditions may apply.
